In quantum mechanics every ket $|\Psi\rangle$ has a corresponding bra $\langle\Psi|$ in the dual space. For R^2 , the vectors in the dual space are represented by row vectors, not column vectors. So if a vector \vec{A} has components A_x and A_y , the representations are

$$\vec{A} \leftrightarrow \begin{bmatrix} A_x \\ A_y \end{bmatrix}$$
, dual of $\vec{A} \leftrightarrow \begin{bmatrix} A_x & A_y \end{bmatrix}$.

As in quantum mechanics, when we operator on a dual vector with an operator, we do so from the left, and the answer is a new dual vector.

(1) Are the operators R_{30} and T_{45} Hermitian? If so, prove it, by calculations using the representations of vectors and operators. If not, find the representations of the adjoints (Hermitian conjugates) of the operators R_{30} and T_{45} .

Let
$$A = \text{dual of } A \iff \begin{bmatrix} A_{\times} & A_{y} \end{bmatrix}$$
 $R_{30} \stackrel{?}{A} \iff \begin{bmatrix} \sqrt{3}/2 & -\frac{1}{2} \\ \frac{1}{2} & \sqrt{3}/2 \end{bmatrix} \begin{bmatrix} A_{\times} \\ A_{y} \end{bmatrix} = \frac{1}{2} \begin{bmatrix} \sqrt{3}A_{\times} - A_{y} \\ A_{\times} + \sqrt{3}A_{y} \end{bmatrix}$

A $R_{30} \iff \begin{bmatrix} A_{\times} & A_{y} \end{bmatrix} \begin{bmatrix} \sqrt{3}/2 & -\frac{1}{2} \\ \frac{1}{2} & \sqrt{3}/2 \end{bmatrix} = \frac{1}{2} \begin{bmatrix} \sqrt{3}A_{\times} + A_{y} \\ -A_{\times} + \sqrt{3}A_{y} \end{bmatrix}$
 $R_{30} \text{ is not Hermitian}$

But T_{45} is.

(2) Using your matrix representations, find the eigenvalues and eigenvectors of R_{30} and T_{45} .

For
$$R_{30}$$
, $\det \begin{bmatrix} 3/2 - \lambda & -1/2 \\ 1/2 & 13/2 - \lambda \end{bmatrix} = 0$ = $0 + \sqrt{3} = 2 - \sqrt{3} + \sqrt{4} = 0$
= $0 + \sqrt{3} + \sqrt{3} + \sqrt{4} = 0$
complex eigenvalues, $\int_{0}^{\infty} -\sqrt{3} + \sqrt{3} + \sqrt{4} = 0$
So no real eigenvectors $\int_{0}^{\infty} -\sqrt{3} + \sqrt{3} + \sqrt{4} = 0$
= $0 + \sqrt{3} + \sqrt{3} + \sqrt{4} = 0$
So no real eigenvectors $\int_{0}^{\infty} -\sqrt{3} + \sqrt{3} + \sqrt{4} = 0$
= $0 + \sqrt{3} + \sqrt{3} + \sqrt{3} + \sqrt{4} = 0$
= $0 + \sqrt{3} + \sqrt{3} + \sqrt{3} + \sqrt{4} = 0$
= $0 + \sqrt{3} + \sqrt{3} + \sqrt{3} + \sqrt{4} = 0$
= $0 + \sqrt{3} + \sqrt{3} + \sqrt{3} + \sqrt{3} + \sqrt{3} = 0$
= $0 + \sqrt{3} + \sqrt{3} + \sqrt{3} + \sqrt{3} + \sqrt{3} = 0$
= $0 + \sqrt{3} + \sqrt{3} + \sqrt{3} + \sqrt{3} + \sqrt{3} = 0$
= $0 + \sqrt{3} + \sqrt{3} + \sqrt{3} + \sqrt{3} + \sqrt{3} = 0$
= $0 + \sqrt{3} + \sqrt{3} + \sqrt{3} + \sqrt{3} + \sqrt{3} = 0$
= $0 + \sqrt{3} + \sqrt{3} + \sqrt{3} + \sqrt{3} + \sqrt{3} = 0$
= $0 + \sqrt{3} + \sqrt{3} + \sqrt{3} + \sqrt{3} + \sqrt{3} = 0$
= $0 + \sqrt{3} + \sqrt{3} + \sqrt{3} + \sqrt{3} + \sqrt{3} = 0$
= $0 + \sqrt{3} + \sqrt{3} + \sqrt{3} + \sqrt{3} + \sqrt{3} = 0$
= $0 + \sqrt{3} + \sqrt{3} + \sqrt{3} + \sqrt{3} + \sqrt{3} = 0$
= $0 + \sqrt{3} + \sqrt{3} + \sqrt{3} + \sqrt{3} + \sqrt{3} = 0$
= $0 + \sqrt{3} + \sqrt{3} + \sqrt{3} + \sqrt{3} + \sqrt{3} + \sqrt{3} = 0$
= $0 + \sqrt{3} + \sqrt{3} + \sqrt{3} + \sqrt{3} + \sqrt{3} + \sqrt{3} = 0$
= $0 + \sqrt{3} + \sqrt{3} + \sqrt{3} + \sqrt{3} + \sqrt{3} + \sqrt{3} = 0$
= $0 + \sqrt{3} = 0$
= $0 + \sqrt{3} + \sqrt{3}$

$$\frac{\lambda = +1}{A_{45}} \quad T_{45} \vec{A} = +1 \vec{A} \Rightarrow \begin{bmatrix} 0 & 1 \\ 1 & 0 \end{bmatrix} \begin{bmatrix} A_{x} \\ A_{y} \end{bmatrix} = \begin{bmatrix} A_{x} \\ A_{y} \end{bmatrix}$$

$$\Rightarrow A_{x} = A_{y} \Rightarrow \vec{A} = \frac{1}{12} \begin{bmatrix} 1 \\ 1 \end{bmatrix}$$

$$\frac{\lambda = -1}{12} \quad T_{45} \vec{A} = -1 \vec{A} \Rightarrow \vec{D} \quad \begin{bmatrix} 0 & 1 \\ 1 & 0 \end{bmatrix} \begin{bmatrix} A_{y} \\ A_{y} \end{bmatrix} = -\begin{bmatrix} A_{y} \\ A_{y} \end{bmatrix}$$

$$A_{x} = -A_{y} \Rightarrow \vec{A} = \frac{1}{12} \begin{bmatrix} 1 \\ -1 \end{bmatrix}$$
