Due October 29, 12:00pm

1. What concepts or ideas from this reading do you have questions about? These can be concepts that you didn't understand or would like to learn more about. For each concept, write a few sentences that describe the concept as best you can and include your questions about the concept.
2. What's the difference between a point transformation and a canonical transformation? Are there restrictions on one type of transformation that are not present in the other?
3. What is a generating function? Where does it come from and how is it used?
